

### Cognitive CHAPTER 3 EXERCISE

The following are examples of learning outcomes; on the second column, write the domain in which each outcome is classified and on the third column the level/category to which the learning outcome belongs.

|   | Domain      | Level/Category* |                        |
|---|-------------|-----------------|------------------------|
| 1. Formulate procedure to the following in preparing for a class demonstration. | Cognitive   | Evaluating      | Creating               |
| 2. Formulate new program  | Cognitive   | Evaluating      | Creating               |
| 3. Perform repeatedly with speed and accuracy                                   | Psychomotor | Articulation    | Naturalization         |
| 4. Listen to others with respect  | Affective   | Receiving       | Responding             |
| 5. Select the most effective among a number of solutions                        | Cognitive   | Understanding   | Evaluating             |
| 6. Watch a more experienced performer   | Cognitive   | Analyzing       | Evaluating             |
| 7. Identify the rules and practice them   | Cognitive   | Understanding   | Applying               |
| 8. Show the ability to solve problems/conflicts.                                | Cognitive   | Applying        | Evaluating             |
| 9. Apply learning principles in studying pupil behavior                         | Cognitive   | Applying        | Analyzing & Evaluating |

|  |           |             |               |
|--|-----------|-------------|---------------|
| 10. Recite prices of commodities from memory | Cognitive | Remembering | Understanding |
|--|-----------|-------------|---------------|

\*for the psychomotor domains, use Harrow's Clarification to determine the level.

\*for the cognitive domain, use the Bloom's and Anderson's taxonomy.
